

Europe Capitals, Corridors & Innovation Arc

European countries, capital hubs, corridor systems, and integration zones

The European opening extent is tighter than the world project so city and corridor detail reads immediately. Integration zones are clipped analytical cells driven by hub access, corridor reach, and country strength indicators. Seven bookmarks target North Sea, Rhine Alpine, Central Europe, Mediterranean, Iberia, and Baltic-Nordic frames for fast review.

Layer Stack

Base Geography

Regional Context

European Countries

- Lower GDP per Capita
- Moderate GDP per Capita
- Strong GDP per Capita
- High GDP per Capita
